INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-9	YES
	Claims		NO
Inventive step (IS)	Claims	1-9	YES
	Claims		NO
Industrial applicability (IA)	Claims	1-9	YES
	Claims		NO

2. Citations and explanations

The present invention relates to a further configuration of a process for preparing certain benzophenones (see formula I) by a synthesis principle which is known *per se*, i.e. by Friedel-Craft acylation of acid chloride (II) with 3,4,5-trimethoxytoluene; see EP-A-897 904 (D1) as the closest prior art.

The claimed configuration of the process consists essentially in the selection of a higher-boiling aromatic hydrocarbon, i.e. chlorobenzene, benzotrifluoride or nitrobenzene, as a solvent for said Friedel-Craft reaction, using a (not further specified) "iron catalyst". This special solvent selection is linked to some technical advantages, such as a faster reaction due to the possibility of using higher reaction temperatures or of eliminating HCl by inert gas stripping. Moreover, it permits the use of smaller ("catalytic") amounts of FC catalyst; see the description, page 2, line 36 - page 3, line 16; and page 4, last paragraph.

D1 recommends ethylene or methylene chloride, benzene, octane, decane or their mixtures as solvents (D1, page 7, lines 30-32). In the relevant examples in the citation, methylene chloride and equimolar amounts of aluminium

chloride are used. The use of the claimed selected solvents is thus not disclosed in this manner by D1, nor does D1 give a person skilled in the art any reason to select them.

D2 describes the preparation of benzophenone by Friedel-Craft acylation with an iron catalyst that consists of iron(III) chloride with considerable amounts of graphite as another necessary component, this feature being necessary for the invention. Although halogenated benzenes and nitrobenzene are also mentioned in general as possible reaction solvents, the halogenated aliphatic hydrocarbons are mentioned as being especially preferred (cf. page 4, line 45 - page 5, line 7). In the examples of the citation, EDC or TCE is used without exception. D2 would thus also fail to prompt a person skilled in the art to design the claimed process as defined in the claims.

In view of the previously published available prior art (D1 and D2), the subject matter claimed in the present application appears to meet the requirements of PCT Article 33(2)-33(4).
